

Both the CVRCD and Palo Verde Salt-Sniffer platforms were developed by customizing a base hydraulic 4WD spray rig produced by the West Texas Lee Company. Various base spray rig designs are commercially available (the Salt-Sniffer platforms were developed using the 4WD, 20 hp Spider Spray Trac rig).

Additionally, West Texas Lee can also custom fabricate tail assemblies (for carrying EM-38DD units), and/or plum in various hydraulic soil sampling systems for use on your MSCA platform.
